Subject : [REDACTED]

Gentlemen:

This office is considering further developmental efforts under the subject Contract in the following areas:

- a. An optional conversion of the chip printer to color printing from color input film.
- b. Conversion of the chip printer auxiliary printing system from the proposed font-hammer system to a silicone diode array data block.
- c. A change in the proposed location of the auxiliary information (across narrow end of the film chip) to placement along the long edge of the film chip with security classification printed on the narrow ends.
- d. Development of a method of roll film tension control that obviates the use of sensor arms that could cause film damage.
- e. Development of a method of film metering (applicable to the chip printer) that does not require the conventional rubber faced metering roller which, on some transport systems, faces the emulsion side of the film, and causes film damage.

NOTICE

This material contains neither recommendations nor conclusions of the United States Government. It has been approved for release under the authority of the Arms Export Control Act. The transmission or revelation of which to an unauthorized person is prohibited by law.
